Raymond M. Hertel, Executive Officer  
California Regional Water Quality Control Board  
107 South Broadway  
Los Angeles, California 90012

Dear Sir:

✓ We are enclosing one copy of a proposed plan for grading improvements at the southwest corner of Main Street and Francisco Street in the City of Carson.

✓ The site is an inactive sanitary landfill which is presently under regulation of Industrial Waste Disposal Permit No. 3366 issued to Southwest Conservation, Inc. on May 10, 1967.

The grading plan proposes filling an existing sump at the northwest corner of the property and only such other grading as is necessary to more positively drain the site, and to verify a clean earth cover over the underlying fill. The sump is to be filled primarily with clean earth import.

It is our proposal to dispose of any Class III material, which may be encountered closer to our finished surface than the required clean earth cover thickness, into the sump from the present bottom (-20 feet) to elevation +0.5 feet. Between elevation 0.5 feet and the required clean earth cover below our finished surface, we propose to dispose of both Class II and Class III material where such material is found closer to our finished surface than the required cover.

This is to request that your board permit such modification of the original Waste Disposal Plan.

Very truly yours,

R. S. Angvire
